## MnM/Nanoloop

---

I posted a while back asking you for some advice about getting a nanoloop cart... cheers for all your help.

I finally got v 1.3 and an old grey Gameboy. The best thing about it has been having it midi'd up with the Monomachine...wow.

I forked out about ?40 (forty quid!) for the custom cable and now have it running through the mono, using it's filters and efx etc. You can switch/mute loops on the fly and the timing is suprisingly tight.

Nice combo.

D

I never bothered with the Midi cable...but I'm thinking I may have to.
