The technology behind this seems pretty interesting, it even works real-time. I wonder how it would sound to play a song using sample data from completely different song. Or play the analysed song backwards... :-P

That's pretty special stuff! I got the impression it would be massively CPU hungry but it didn't seem to require anything from Star Trek to do its thing. A truly great concept and for many synth freaks it wouldn't matter too much about the video. I'd love to be able to use it just sonically, you know, choose your own source material, and the realtime possibilities are very impressive.

Give that baby a year to evolve and quadruple the resolution (not that its poor right now) and things could get very silly indeed. Bring it on...
