Their stuff looks cool, but the absence of a lot of reviews on the web makes me a little bit leary (except for their more 'popular' synths). I am personally interested in their analog drum machine, the MFB-502. It's cheap, analog, and there is a small community surrounding it that includes discussions of modifications that can be made.

Please, more information!

There's a dearth of reviews and sounds on the net.

I love MFB's filters.

The fact that their oscs (on the other synths--not the SynthII) are digital really scared me away, though.

The Multifilter seems like a really cool machine.

Oh, and the 502--I need more sounds before I plunk down the dough on a dedicated drumcomputer. You say there are mods?

Jsrocket: report back when you get your machine.

hence the "except for their more popular synths" statement...not to split hairs--well, yes. To split hairs. Sorry. I'm that guy.

Did you see the MFB Kult? \$179 and alot of sounds...but samples only. I will let you know my opinion on the machine in a few days.

Yeah, I saw it!

Seems kinda cool, but it has to do something different/unique to justify its existence in my studio. I'm sure you're the same way.

A couple interesting quotes from the Kult document:

"Rhythms and Fill In?s 1-10 can be user programmed. Any Rhythm and Fill In consists of 3 or 4 tracks with 16 steps each. Every track can use of the 192 available sounds. On the other hand it is only possible to use only one Kick or

Snare at the same time."

Hum, ok. Strange limitation.

Something cool:

"Since the sounds cannot be longer than the original sample, with longer release the compression is increased."

A shame that there's no pitch or reverse control, only decay and attack.

Still, can't wait to see...

The way I see it...is it is cheap enough to take a chance on when you have some money burning a hole in your pocket.

I understand completely. Let us know how you like it, js.

Any word yet? I just got a new job and this first paycheck money is burnin' a hole in my pocket!

I think a crappy analog drum machine may hit the spot.
