## Yes! Scored a voyager.

Posted by ggoodwin - 2006/03/13 19:13

---

I've always wanted one of these and I sniped one for a pretty decent price...I can't wait to play it...anybody else used one of these?

Here she is:

HAHA :lol:  
VOYAGER SUCKS!!  
better check the MOOG LEOPARD

no really you lucky!  
maybe you'll post kind of a review ? :-P

Definetely... great deal. I'm jealous... I'm waiting for the next moog...

[http://www.moogmusic.com/news.php?cat\\_id=104](http://www.moogmusic.com/news.php?cat_id=104)

But only if it is within the price range in my head.

Yep, I got one a while back. It's gorgeous, worthy every penny. I've used it for a lot of processing as well as normal synty duties and the sound quality is lovely. The dual filters...mmmm...

and so you're selling the Monomachine :-o

---

## Re: Yes! Scored a voyager.

Don't worry, I'm getting an sfx-60 ASAP. I received the Voyager this morning and it sounds really nice from the presets. I already like the keybed on the voyager MUCH better than the sfx-6, and the touchpad should be an interesting, if not identical, substitute for the joystick.

I had planned to downgrade to the 60 eventually, but this nice deal that I got on the voyager sort of sped up the decision process....you know how it goes :-)

---

## Re: Yes! Scored a voyager.

---

I love the touchpad, the way it senses area as well as position is brilliant. :-D

---

## Re: Yes! Scored a voyager.

Posted by ggoodwin - 2006/03/21 21:19

---

Yes, I like it quite a bit so far. I'm still trying to figure out how to play a bassline, rock the mod/pitch wheels, and also do meaningful gestures on the touchpad all at the same time. I wonder if I could do it with my nose....

---

## Re: Yes! Scored a voyager.

I find expression pedals help a lot there. You can get some fantastically mangled sounds, for instance by patching an expression pedal ---> LFO rate.

---

phew :-D

Just waiting to see what Moog will come out with next week ...

---

Yeah, I knew you would probably be stressing out when you heard I was selling my sfx-6... ;-)

I don't know what to expect from Moog at the Messe, but it's gotta be something desirable. Should be interesting to see what they've got now that Bob is gone.

Hopefully Elektron doesn't release anything new...I'm broke! Is that selfish?

---

if they release something new, we can probably just forget about turbomidi ever happening...

what is this 1983? A monosynth with presets?

I bet it sounds awesome though

I've got the RME, just started using the send return loop from the mixer, the editor is great too, sound tower really improved it last update.

**Re: Yes! Scored a voyager.**

Posted by ggoodwin - 2006/03/24 01:20

---

have you played with creating feedback via the headphone out?

=====

**Re: Yes! Scored a voyager.**

Posted by monofever - 2006/03/24 20:04

---

Not gone down the headphone feedback route yet, would you feed it back to the mixer in? I have fed it MD U/W and x0x/303 though. I am sampling the raw oscillators into live/simpler and playing chords etc that way, and it solves a big problem I have had with the Moog - I love the sound but want polyphony in some circumstances.

=====

**Re: Yes! Scored a voyager.**

Posted by milkmansnd - 2006/03/24 20:50

---

get the arturia minimoog software - you can use the voyager as a controller and do poly...

=====

**Re: Yes! Scored a voyager.**

Posted by monofever - 2006/03/24 23:38

---

I looked into that before I got the moog, then I upgraded from a powerbook so arturia is more of a possibility, although I liked the minimonsta. Actually I think I'm doing OK with the real thing and a sampler, but.....

in fact I just pulled up the demo of Arturia, lovely sounds but not an analog moog. I think I'm getting better results for my own ears.

Love my signature edition Voyager. So you guys like the editor? I have been thinking about picking that up, but wasn't totally sure. I have yet to try the headphone feedback trick either, but it sounds like it could be monstrous. Congrats on your new purchase, ggoodwin.

I recommend it highly, gives great control of the patches, saving and genetics are well worth having, ver 2.0 is even better with full control of bank changes.

The editor runs alongside Logic and Live and gives you deep control of every aspect of the patch, in fact it helped me get to grips with the huge modulation possibilities the moog offers.

this editor sounds interesting.

can you tell us a little about it ? like how it works...

cant you just send CC envelopes from logic or live, ...?

=====

## Re: Yes! Scored a voyager.

Posted by monofever - 2006/05/04 01:41

---

Regarding CC's, I wrote a little logic environment for the Moog which worked quite well, but the editor takes this a lot further, allowing complex library functions for your patches, so I can easily save an important patch on my harddrive without disturbing my workflow for example.

I can also morph patches, say I want a round bass with a buzzy edge, if I have a buzzy patch and a round bass, I can have them create a family of patches between them and audition and choose the one which has the right mixture.

Another advantage is editing of the entire patch without navigating menus, say I want to change both filters from 4 to 2 pole and alter the Modulation source on pot 1, I can do this in seconds with the editor. In fact this is my favourite bit.

On my system it runs happily alongside either Live or Logic and allows me to manage the patch a bit like a vst, it all seems quite simple, but I would like to have the same option with a Monomachine.

=====

the mutating function between patches sounds good...

where is this editor available ?

=====

## Re: Yes! Scored a voyager.
