## MIDI CONTOLLERS

Posted by casiogirl - 2006/03/16 08:37

---

What controller are you using ?  
What controller are you dreaming of? :-D

I'm using a BCR2000

and I'm dreamin of a mawzer custom controller

---

---

using the G2 as a controller at the moment,  
but would LOVE to have one of these  
[http://www.jazzmutant.com/lemur\\_overview.php](http://www.jazzmutant.com/lemur_overview.php) :-)

using sfx6 and trigger finger as controllers now....one day I dream of building a fancy custom MIDIBOX controller that is set up for some kind of crazy Ableton Live mapping, with some buttons, switches, levers, pulleys, and a couple of those leg harnesses from the gynecologist's office.

---

i have knobs: BCR2000, pads: triggerfinger & keys: evolution mk249c

and i'd like to check out the new novation remote SL's when they will support 'automapping' with Live. check:  
<http://www.novationmusic.com/automap/> (also in last month's SOS)

These look ok for Live...depending on your needs:

That is very neat. Pricey though. I'm dreaming of building a midibox as well. I'm just about finished with my mini-synth then it's on to the two compressors, first.

SL with automap looks very cool. The automap concept seems like it should have been implemented a long time ago, it's a no brainer in retrospect ;) Let the machines talk and agree on their communications scheme, and let me make music. However, it depends on native support in the host application so that introduces its own share of problems. I guess that soon there will be different controllers by different manufacturers which support automapping...that will be a good time for everybody :)

Faderfox: cool concept, too expensive for what they are. I'll probably just rip off their layout and build a midibox that incorporates 4 or 5 of those things, for about \$100.

M-Audio UC 33 E for me. Works like a charm.

oh! it's available now! <http://www.novationmusic.com/news.asp?id=117>

is there anyone with a remote SL and Live to try this?

I use an M-Audio Oxygen 8 and a Axiom 25. The Oxy 8...I use with my synths...the Axiom is used with Live and Reason.

=====

## Re: MIDI CONTOLLERS

Novation Remote25... its ok but its a bit cheap feeling when you're using it. I wish you could get a midi controller made out of solid steel, something you could throw off a cliff and it'd make a huge crater and still work perfectly afterwards.

A friend just passed this on to me - the Monome. Looks very interesting. USB only though - so you'd have to go through a computer (sounds like there's a mapping program to set everything up).
