118 NI Reaktor Loops for octatrack

Posted by fuadvonloop - 2011/01/22 05:54

_____

I have recorded alot of 4 bar reaktor loops while waiting for the octatrack, so I want to share too :) ... already testet inside the machine and they are really cool for glitchy techno.

download here -> http://www.vonloops.com/promo/reaktorloopsforoctatrack.rar

enjoy ;)

_____

Great thanks!

The wait for my OT to arrive is manifesting itself as physical pain now.....

Cool stuff, will check dem and load dem and jam dem! I am realizing that OT & loops go together like peanut butter and chocolate (or jam).

Thanks indeed, very generous of you!

Thanks also to Le Cosmonaute for resurrecting this thread...totally missed it.

don't know ho I missed this the first time around, thanx! I'm currently recording a bunch of loops from the MDUW in conjunction with a future EP, but I'll happily share some later on :)

Had some hours of fun yesterday with those loops! Thanks Audiolog :)

With the current OS you can just hit buttons in sample trig mode to select new loops, much more fun than in the early OS phase (where I had those loops installed already).

The great thing about this package in particular is that there's no need to take care about harmonics, every loop fits to any other, at least to 80%. So you can just hit the trig buttons without much organization :)

_____

An MBR is only one block long.

There are no "files" in an MBR. It is not a filesystem.

That said, it DOES have block numbers that refer to additional blocks that are needed to complete a boot program. Moving the data blocks via repartitioning/replacement means the block numbers are no longer valid... and the MBR must be replaced before a reboot will be successful.
