change octatrack pattern with midi cc from external machine

Posted by psoul - 2012/10/22 02:21

_____

i'm pretty sure is not possible.. neither to change part... anybody have found the solution or just a workaround?

_____

You can change patterns using MIDI program changes, is that what you meant?

_____

hey smoky

yes but from external machine to octatrack, so changing pattern inside octatrack from an external sequencer

_____

So you send the program change from your external machine (in my case Cirklon) and octatrack changes its pattern.

_____

so is it possible?
i check control change list from the manual, but can't find that... if u know how to make please explain!!! :)
thanks

_____

I can't really explain, you either know what a program change is or you don't. A MIDI Continuous Controller has a controller number and a 7-bit value. A MIDI program change also has a 7-bit value and also two bank select CCs associated, potentially. In the case of the Octatrack, one of these (MIDI CC32) is assigned to LFO2 depth, so since its bank select is a bit quirky, you only use the one value CC0 (all IIRC BTW).

Am I misunderstanding your question perhaps?

_____

mate ok there is different between program change and control change, but i still don't understand if u can change pattern from your external sequencer? do u?
thanks a lot for the moment :)

_____

No worries, there's something to baffle everyone with this wonderful machine. Fortunately it also delights in equal measure. :)

_____

ahah yes the learning curve has some drops here and there, is a completely different sampler from the olds , so u need to restart from skill 0 :)
again thanks

_____

do you know if with a program change or another midi message could change the part or a bank?

im trying to control externally the samples loaded in the tracks.

any help would be rad.

thanks a lot

_____

Hey PSOUL,

Would you mind sharing some more detail regarding the solution you came up with for this issue? I'd like to be able to trigger Octatrack pattern changes with my Behringer FCB1010 pedal and I'm having trouble figuring out exactly which Program Change messages I'm supposed to be sending.

Thanks

-wj

_____

As an add-on to my previous question...I am also curious to know if the MIDI channel through which the footswitch's program change messages are being sent makes a difference. In other words, since the program change to switch patterns would essentially be affecting all MIDI (and audio) tracks, on which channel should the message be coming?

Thanks
