
Octatrack recording memory full?

Posted by noxical - 2013/08/31 16:06

When I try to make recording using flex machine, the Octatrack indicates that the recording memory is full (REC FULL). However, when I check the card status there is still 500 mb free.

I have a 16 GB card.

I also have strong feeling that my card is only 50% working. I have approx. 9 GB of samples. However, only 500 mb free? and the 5 projects can never cover the other half.

Maybe someone recognized the same problems?

One possibility is that if you back up your stuff and reformat your card, it may behave better. Assuming that part of the problem is card disk errors. Not sure though.

Internal memory is 80mb, I think it is telling you that is full rather than the card.
