
OT: ARP Question

Posted by ttaralli - 2013/09/16 04:52

I'm having a bit of trouble with the Octatrack today. It seems to be sending midi notes to my Boomstar no problem, but the second I go to the Arp menu and turn the mode from "off" to any other settings it seems to stop sending midi???? Any ideas as to why this might be happening?

It also doesn't seem to send midi information to the Boomstar once I've sequenced it into the octatrack. So, it's sending midi if I play from an external keyboard or the chromatic keyboard, It will record those notes in real time or step record mode, but it will not send midi data from those record notes during playback and it will not send midi when the arp is turned on.

Thanks and FYI I'm still very new to this machine so this could be something very obvious that I'm overlooking. Thanks!
