
New OS for the machinedrum 1.53

Posted by data-line - 2009/10/02 00:00

EHEHEYEYY

yep there it is the new OS.

Higher knob resolutions???!?!?!??

I

NEED

TO

GET

HOME

NOW

!

Installed - machine still works. Will play more later.

=====

Re:New OS for the machinedrum 1.53

Posted by 214 - 2009/10/02 01:34

pardon my ignorance, but what does the higher resolution mean?

=====

Re:New OS for the machinedrum 1.53

Posted by GYS - 2009/10/02 01:40

First off, friendly reminder to do a full SYS EX dump of your MD before upgrading. ;)

Second off, awesome! :laugh:

Summary of updates and Bug Fixes:

Updates

Global Menu repartitioned, find your favourite submenu elsewhere!

Turbocharge MIDI menu added to Global menu enabling up to 10x MIDI speed communication between compatible units.

MKII only: Global Mechanical settings menu enabling higher resolution of the encoders, find them in the Control submenu.

Bug fixes

Undo function not available with external sync. Fixed.

3/4 tempo speed drops parameter locks. Fixed.

CTR-DL/GB/EQ/DX hung the machine when switching between different kits. Fixed.

=====

214 wrote:

pardon my ignorance, but what does the higher resolution mean?

You'll be able to do finer tuning of parameters.

=====

Re:New OS for the machinedrum 1.53

Posted by GeneralBigBag - 2009/10/02 01:43

So tuning samples past +/- 12st, drums etc will now be much more accurate?

=====

Re:New OS for the machinedrum 1.53

Posted by d1rtynyc - 2009/10/02 01:59

Does anyone know if this will work on mkl?
I know the higher res knobs won't, but the update itself.

=====

Re:New OS for the machinedrum 1.53

Posted by howdragonsdisappear - 2009/10/02 02:18

Does anyone know if this will work on mkl?

yes

You'll be able to do finer tuning of parameters.

normally yes, should be cool on srr also ..

The mkII have different encoders ?

I noticed that it wasn't the same between my MD mkl and my MnM mKII, but never see the one of the MD MkII

=====

Re:New OS for the machinedrum 1.53

yep it should. back up your sysex then update.

=====

Re:New OS for the machinedrum 1.53

Posted by Tarekith - 2009/10/02 02:19

Yes, it should work on the MKI's.

Not really seeing much difference here with the higher res knobs, anyone else?

=====

Re:New OS for the machinedrum 1.53

Posted by macrobe - 2009/10/02 02:34

i like the new hi-res encoders. The encoder turns faster now from 0-127, definitely speeds up tweaking!

=====

Re:New OS for the machinedrum 1.53

Posted by earsmack - 2009/10/02 02:35

Setting it to 32 it seemed less turn for more value - so technically lower-res? I guess it depends how you look at it? Is that what you're seeing though?

=====

Re:New OS for the machinedrum 1.53

Posted by AN1 - 2009/10/02 02:36

Awesome! They even fixed the undo bug! I just made a thread about this like two weeks ago and reported it then. That's quick ;-)

=====

yep it is a tiny difference,

it takes less turns to get to 127 from 0 now.

nifty.

=====

Re:New OS for the machinedrum 1.53

Posted by Smoof - 2009/10/02 03:31

Hey guys, could someone please help me, i cant find the new submenu :/

=====

I'm with Earsmack on this - doesn't fewer turns = lower resolution?

p.s. I don't even own an MD, what am I doing here? :)

:(I cant find the global sub=menu for encoder resolution

I just hope Im not being really stupid:blush:

=====

Re:New OS for the machinedrum 1.53

Posted by Tarekith - 2009/10/02 05:30

It's called "Mech".

Funny, I thought it was backwards too regarding the resolution. Finally realized that it took slightly less turns now, but that's counterintuitive ;)

=====

Re:New OS for the machinedrum 1.53

Posted by glitched - 2009/10/02 05:32

Turbocharge MIDI menu added to Global menu enabling up to 10x MIDI speed communication between compatible units.

I guess you just don't need a TM-1 if the other device supports Turbomidi, huh? Well, how many "compatible units" are there? The Ruin & Wesen thing is the only device I know of.

By the way, just tested and it doesn't work with the Monomachine (MKI).

Is that it?

=====

Re:New OS for the machinedrum 1.53

that may just be the 'behavior' of the encoders.. turn them far in one turn and they go to a high value fast.. turn them slow and they creep through the finer resolution. many synths have encoders that behave like this.

or that's my guess. i haven't installed the update so can't check.

=====

Re:New OS for the machinedrum 1.53

Posted by LIVESEQ - 2009/10/02 06:25

just my thoughts.

If the encoders on the mk2 are higher resolution then they will increment in finer steps than the mk1 therefore less physical movement = more digital movement.

I suppose the encoders would go through a divider to get your 127 anyway. It just depends on the ratio. they could be customised to work at loads of different rates.

Doesn't make any difference to me because I have a mk1. Gives us something to think and talk about though.

Does the mk2 have more resolution on the controls (screen readout) now?

=====

Well, to me that says the new product will be "compatible" with TM-1 protocol.

And, that adds a bit more credence to the new-product-is-a-sampler argument. Although it could be that this is just the new way of doing things.

=====

Re:New OS for the machinedrum 1.53

Posted by Jims computer beats - 2009/10/02 07:37

higher resolution... how does it work? Let's say I want the parameter to be at perfect center, and let's say the perfect center of this parameter is normally 64. On higher resolution, is there a value at 64, a different value at 64.5 and another value at 65?

I don't know if my question is clear... I guess I'll have to install the new OS and see by myself (probably most of the time this feature will be better than before)

=====

The MnM isn't compatible yet since unit-to-unit turbo communication mode isn't available in the old OS. I guess we'll have to wait for the next version. And even then I don't really see what you would need to transfer between the MD and the MnM in turbo mode... Turbo syncing between units would be very NICE though.

=====

Re:New OS for the machinedrum 1.53

Yeah, I don't have any need for super-quick communication between the MD and MnM.

I'm really starting to believe that the new elektron thing is the re-branded Ruin & Wesen Minicommand joystick device because it requires the Turbomidi's 10x communication speed.

You would also need it for the mini command to be able to upload samples via its internal storage... as far as I'm aware they have given wesen access to parts of the code for this so maybe it is to allow this to happen.

(I'm not saying MC will be rebranded or released by elektron... I do however think this feature will be supported by them as they have already began that process by helping Wesen)

As for the new OS does it mean more vlaues or just faster jumps?

=====

Re:New OS for the machinedrum 1.53

Posted by earsmack - 2009/10/02 10:18

Not sure if this got answered but I don't think the values of any of the params are "high resolution" - if it went from 0-127 in whole numbers it is still that way - it does NOT go from 0.0 to 127.0 in 1/10ths for example.

This talk of "higher resolution" seems to be only how encoders react - takes less turns to get from 0-127 now than it did before. I'm guessing 1/3 less turns judging that the default value of this setting is 24 (normal) and the only other option is 32 (faster).

I can only assume that the amount of turn required to move 24 values will now produce a value change of 32 instead. Make sense?

=====

Re:New OS for the machinedrum 1.53

Posted by tIB - 2009/10/02 10:31

^ makes sense, though its a shame they cant move in tenths as you suggest or half steps, I get some beautiful sounds out of the MDUW but they are a pain in the arse to tune to anything else so I usually dont bother.

=====

nope. i can debunk that one it def not an elektron r&w minicommand. also turbomidi is not yet implemented in the minicommand/monojoystick in any of the released firmwares. all current functionality uses the normal midi protocol.

also i'm pretty sure the turbomidi spec is open source. i may be wrong.

=====

Re:New OS for the machinedrum 1.53

Posted by Veets - 2009/10/02 13:31

Yes, there are other MIDI "accelerators" out there so this is not a new idea. Open-source, I don't know, but this is not some Elektron-only concept. I had a post about this a while back - think the link I posted was to a Peavey site of all places.

you are not alone....:(

machinedrumcrash

it seems the update itself or playing around with c6 and accidentally sending a sample via midi to my non UW machine has killed the dsp... don't know exactly because the failure occurred only after switching off and on again...

btw. my bluescreen is more black and amber than blue;)

Re:New OS for the machinedrum 1.53

Posted by soundklinik - 2009/10/02 22:34

WOW Are you talking about the latest update 1.53b?? You have the same MD SPS1 MKI...

I saw your :(video, mine is doing exactly the same.
I didn't even use the sample manager, but I wondered why it is even there, it could have been "filtered out", or disabled in non UW machines, if it is indeed that dangerous...

So the moral to this story is: SPS-1 MK I, maybe MKII? owners- WAIT with update!!!
Mine is going to Sweden for autopsy.

=====

Re:New OS for the machinedrum 1.53

Posted by Sinner6 - 2009/10/02 22:47

Can you boot it while holding down the function key? This happened to my MnM during a recent attempt to update it, and going back to an older firmware seems to have brought it back to life.

=====

Re:New OS for the machinedrum 1.53

number #1 rule for elektron OS updating (applies to other manufacturers too) is never load the new OS until (at last) 2 weeks of debugging
is not the first time this happens...elektron quick fixing/replacing OS updates in the days after any release is a classic

anyway I think anxious/new users contribute a lot to patient/older ones with the immolation of their units for a quick diagnosis of bugs and crashes!
thank you martirs!

Posted by Tarekith - 2009/10/03 05:07

Interesting that no one is really speculating on the new Turbomidi transmission between units without a TM-1. I mean, it makes no sense to transmit pattern sysex from the MD to another unit like the MnM, it can't use it. Which really only leaves one more thing you WOULD want to transfer from the MD-UW to some other unit....

sorry i forgot a word !

i ask this again maybe someone know : are the machinedrum mkl encoders are different from the mkII ?

I don't know exactly but I think the encoders self are the same on both the mkl and the mkII. But the mathematics i.e. the processing behind them could be different which allows the software engineer to implement an adjustable divisor to the step encoders only on the mkII units...

was thinking that maybe it's just to transfer sample from mduw to mduw ..
there's no way without the tm1 to activate the 10x transfer
Was thinking the same thing, but how many users in there have 2 MD's, or would use such feature with another user.
Looks like they have something coming up soon.

Maybe it was just implemented to bring the new "machinecrashing" os ten times faster on the md;) :kiss:... For the impatient:woohoo:

more wild speculation. :)

will it come soon ...

magic eightball says, maybe not as soon as all would like.

So, has anyone had any success with 1.53b OS ? Or is everyone afraid to try it?!

-----:unsure:

Lowdene wrote:

I upgraded to 1.53, didn't really use it, so no problems, then tried to follow the advice to go up to 1.53B, but it won't load. Also I can't go back to 1.52f (won't load either). Can't go forward; can't go back. There is a word for this but I won't use it on the forum.

Maybe they're too distracted with the new product to get this right.

So now waiting for a fresh MnM OS 1.22(b) and some Elektron Films... that would be... nice!...

...let the new dawn begin!...

Hi,
since I upgraded to OS 1.53b, I can see the position of parameters linked to LFOs move.
It works with all ctr machines (except ctr-all).
So, when it moves, I can not see the value I have set anymore... :dry:
Did someone notice that ? What do you think about this ?

You should see the original value when the MD is stopped. I think it's a great feature. You can see right away which parameter is affected by LFOs, and get a better view of the speed and depth...

I think it's great to see the movements for the same reasons as you described...
BUT It still moves when the MD is stopped ! So I can not see the original value if an LFO is affected... Any solutions ?

I'm not in front of the MD now... But have you tried pushing (and not turning) down the knob of the LFO'd parameter to see if it shows a value?

I will try tonight...

Hi, it doesn't work: Even when stopped, you can see the LFO affecting the specified parameter. That's not really that impractical, but if you try tweaking the parameter with the decoders, weird things start happening. (I'll start a new post for this)

Niet, it doesn't work.

The only solution is to turn down the LFO. :dry:
So I think this feature is a bit questionable, and it's a great idea to open a post about that to have more opinions and maybe solutions...

I really like this feature TBH. When I first got the MD, I was wondering why we didn't see the LFO'ed parameter moving. Anyway, I try to adjust the sound with my ears generally, and try not to look at the screen for a digital value. In fact, it should be great if there was an "hide parameters digital value" in the global menu. I have a hard time not looking at the screen and adjust with my ears; instead I tend to put what I think is the right digital value.
