## MM: Vocoder-style effect

Posted by TOS - 2011/09/25 20:25

---

Alright you funny people.

Here's how to achieve a Vocoder-style effect on the Monomachine:

1. Make a Kit with an FX-Thru machine. Set it to receive audio from INP AB (I use the Machinedrum as source). Make sure that filter tracking (Kit > Assign > Key > HPF and LPF) is switched on.

2. Set FX Thru as follows:

Amp page

- Dec 127

- Rel 127

Filter page

- Base 24

- Width 0

- LPQ 80+

(You'll experiment with these of course)

3. Enter Poly Mode

4. Start the source and hit some notes on the Monomachine. You should hear the filter resonating at particular frequencies, based on the notes you've played.

Hope this helps
